Statement of Purpose

Prepared for Staff AI Engineer, Teradata, 23 September 2026

Dear Teradata Hiring Team,

I am applying for the Staff AI Engineer role at Teradata because it sits exactly where I have chosen to build my career: at the meeting point of enterprise data and trustworthy, production grade AI. Teradata has spent decades earning the trust of enterprises with their most critical data, and its Enterprise Vector Store and Enterprise AgentStack show where that trust is heading next: agentic and generative AI on top of governed data, safely, at scale, and with answers people can rely on. That is the problem I have spent the last several years solving in production.

I have owned AI platform architecture end to end, not individual features. I designed ByanRAG 2.2, a multi tenant, Arabic first RAG platform deployed on premises inside regulated government networks, with isolated data per organization, five levels of access control enforced on every endpoint, full audit logging, and a hybrid retrieval pipeline that returns source cited answers in 2 to 3 seconds on self hosted open source models. It now serves two organizations and more than 150 users. Alongside it, I built the Claude as judge evaluation pipeline, with faithfulness scoring and prompt injection defenses, that helped take Yehia R1 to first place on the AraGen Leaderboard. I care as much about proving an AI system is correct and safe as about making it work, because that is what separates a demo from something an enterprise will run.

The technical leadership I bring is threefold. First, architecture ownership: I take systems from design through distributed, fault tolerant deployment, from Celery and Redis to AWS ECS, with full Prometheus, Grafana and Loki observability and more than 600 tests in CI/CD. Second, agentic systems at production quality: LangGraph, CrewAI and MCP orchestration with tool calling and multi step planning, applied to real workflows such as government contracting analysis on Global Holman and a live voice agent on Whoza.ai. Third, raising the people around me: I lead and mentor a team of four engineers on ByanRAG, set standards for testing, deployment and model integration, and have trained more than 150 professionals.

What draws me to this role is the scale and seriousness of the problem. I have built enterprise AI for government and regulated clients across Saudi Arabia, the UAE, the US and the UK, where the requirements match Teradata's: reliability, security, data consistency, and answers that hold up under scrutiny. A Staff role, where I can shape architecture decisions, mentor engineers and resolve hard production problems, is where I can contribute the most. I am originally from Pakistan, based in Riyadh, and flexible on the working arrangement that suits the team.

I would be glad to bring this experience to Teradata and help build the next generation of AI products on the enterprise data your customers already trust you with. Thank you for considering my application.

Sincerely,

Mustafa Shoukat
