Statement of Purpose

Prepared for Staff AI Engineer, Teradata (Job ID 220477), 23 September 2026

Dear Teradata Hiring Team,

I am applying for the Staff AI Engineer role because it sits where I have chosen to build my career: trustworthy AI on top of enterprise data. Teradata has earned the trust of large enterprises with their most important data, and its recent work on the Enterprise Vector Store and on agentic access to that data through MCP shows where the platform is heading. Bringing retrieval and agents to governed data, at scale and with answers people can rely on, is the problem I have spent the last several years solving.

The work that prepared me most is ByanRAG 2.2, an Arabic first RAG platform I designed for regulated organizations in Saudi Arabia. It had to keep each organization's data isolated, enforce access on every request, record every action, and still return fast, cited answers in two languages. Alongside it I built the evaluation pipeline that took Yehia R1 to first place on the AraGen Leaderboard. Both taught me that an enterprise AI system is judged on its reliability and its evidence, not on a demo.

In my first months I would focus on three things. First, learning Teradata's platform, codebase and customers in depth before proposing change. Second, contributing working code early while helping to set clear baselines for evaluation, observability and testing on the AI products. Third, supporting the engineers around me through design reviews, code reviews and mentoring, as I have done in my current team.

At this stage of my career I want to grow as a Staff engineer: shaping architecture across teams, raising engineering standards, and building AI products that enterprises trust. I would welcome the chance to do that at Teradata, and thank you for considering my application.

Sincerely,

Mustafa Shoukat
