Statement of Purpose

Staff AI Engineer, Teradata, 24 September 2026

Dear Teradata Hiring Team,

I am applying for the Staff AI Engineer role because it sits where I have chosen to build my career: trustworthy, production grade AI on top of enterprise data. Teradata's Enterprise Vector Store and Enterprise AgentStack show a clear direction, bringing retrieval and agents to governed data at scale. That is the problem I have spent the last several years solving in production.

My strongest preparation is ByanRAG 2.2, the Arabic first RAG platform I designed for regulated organizations in Saudi Arabia and now lead with a team of four. It isolates each organization's data, enforces access on every request, records every action and returns cited answers in 2 to 3 seconds on self hosted open source models, today for two organizations and more than 150 users. Alongside it, I built the evaluation pipeline that helped take Yehia R1 to first place on the AraGen Leaderboard. Both taught me that enterprise AI is judged on reliability and evidence, not on a demo.

In my first months I would learn Teradata's platform, codebase and customers in depth, contribute working code early, and help set clear baselines for evaluation, observability and testing across the AI products. I would also support the engineers around me through design reviews, code reviews and mentoring, as I do with my current team.

At this stage of my career I want to grow as a Staff engineer: shaping architecture across teams, raising engineering standards and building AI products that enterprises trust. I am based in Riyadh and flexible on the working arrangement that suits the team. Thank you for considering my application.

Sincerely,

Mustafa Shoukat
